Increased access to mental health services is commonly promoted as a strategy to decrease firearm violence and suicide. Indeed, organizations on opposite sides of gun regulation debates often agree that policies designed to improve access to mental health care offer a promising approach to reducing gun violence. [1] Here, we synthesize the evidence on access to mental health care and its ...

Propensity score analysis (PSA) arose as a way to achieve exchangeability between exposed and unexposed groups in observational studies without relying on traditional model building. Exchangeability is critical to our causal inference. In experimental studies (e.g. randomized control trials), the probability of being exposed is 0.5.
